REVESTECH  
SUSTAINABILITY  
INTERNATIONALIZATION  
COMPANY

**COME IN  
AND  
DISCOVER  
THE BEST  
PRODUCTS  
FOR HOTELS  
AND THEIR  
CUSTOMERS**

One of the cornerstones of Revestech's philosophy since its birth is to design and manufacture products that make people's lives easier. The terms product and person, are always linked, intertwined. The line of products that we have created for hotels, tourist apartments, rural houses, etc. has in its conception a deep reflection on the stories that, every day, take place in each and every one of the establishments of the sector.

Water is, in many cases, the protagonist of these stories.

**WE INTRODUCE YOU TO THE MAIN ACTORS.**

*"Anticipating problems is the best strategy for customer satisfaction and loyalty"*

## MARTA GARCÍA

### Hotel director

For her, the most important aspect of her work is the satisfaction of the guests of the hotel she runs. She knows, better than anyone, the importance of the invisible being perfect. Humidity in the bathroom, leaks in the pool or cracks on the roof or terraces are a big problem and can result in substantial economic losses. What's more, these problems make her focus on giving immediate solution to them leaving aside the most fundamental concern in any hotel, the customer.

**Revestech waterproofing systems are the most suitable ones to prevent these problems. In that way, Marta can concentrate on providing the best possible experience to her customers.**

*"If the client has no complaint, I feel that my job is well done"*

## ANA LOPES Hotel receptionist

Ana is passionate about her work. She is aware that the reception is the business card of a hotel. Therefore, she is happy when she receives calls from guests asking her for places to visit or recommendations for restaurants in the area. She is not so much when calls are intended to complain about the smells that come from the humidity in the bathroom or the mould that can be seen in the joints of the walls in the shower.

**The invisible and preventive work of Revestech systems will ensure the comfort and happiness of the clients and that of Ana as well.**

*“Things that are done well from the beginning, help avoid expensive and difficult repairs”*

## FRANCISCO TEJADA Maintenance personnel

Francisco is part of the maintenance staff of the hotel. Everything has to work perfectly. He does not like when someone tells him that the shower upstairs has leaks or that there is moisture at the reception.

**A correct installation with Revestech systems in new construction or rehabilitation guarantee the tranquillity of the guests and, therefore, that of Francisco.**

*"The spaces that are easy to clean and without humidity, make our work more efficient and visible"*

## MERCEDES CASTRO Housekeeper

Mercedes has a job in which logistics and processes are fundamental. Each and every one of the rooms in the hotel must be prepared at a predetermined time. In a perfect state of order and cleanliness. The cleaning of the bathrooms and showers is what worries her the most. A single strand of hair on the floor can bring with it a customer's complaint and discomfort.

**Revestech shower systems are perfect for ensuring impeccable cleaning.**

*"With so much daily hustle and bustle, we ask a hotel to make everything easy for us and to be very well taken care of"*

## FAMILIA GUTIÉRREZ BERNIA Regular customers

Raquel and Ernesto are regular customers. They and their daughters, Olivia and Valentina, stay at the hotel every year. They highlight the friendliness of the staff, the services offered, the quality and maintenance of the facilities. They always recommend the establishment to their friends.

**Guests expect clean and well-maintained rooms and common areas. Comfort, quality of services and well-conditioned spaces are essential for a good reputation.**

# DYSO SYSTEM

High traffic in a hotel forces to increase the safety in construction solutions. High performance systems are necessary to protect the floors as much as possible against cracks and damage.

**DYSO**: flexible membrane for high uncoupling underneath ceramic flooring in interior spaces. Special under large-format pieces and underfloor heating. Maximum resistance to deformation, supporting cracks up to 20mm. Optimal grip with tile adhesive C2 S1/S2. Guaranteed results.

## conventional substrate

## substrate with underfloor heating

# intact flooring

extreme uncoupling in exteriors and interiors

★★★★★ Easy and quick installation.

It reduces the transmission of tensions produced by structural movements from the substrate to the finished flooring.

It prevents the formation of cracks in the flooring.

Ideal for installing underneath large format tiles and underfloor heating.

# ECODRY EXTERIORS

Waterproofing the flooring in hotels is vital to maintain the structural integrity of the building, prevent moisture damage, ensure the durability of materials, facilitate cleaning and, most importantly, ensure the safety of guests and staff.

## ECODRY50

0,52 mm 335 g/m<sup>2</sup>

Eco-responsible membrane for waterproofing small walkable flat surfaces (balconies and terraces) and bathrooms, walls and floors in indoor humid areas. It is composed of a polymeric membrane of high-performance thermoplastic polyolefins CPE (EVA-based Circular Polymer), resulting from the transformation and treatment of raw materials of circular economy, and extruded on polyester fibres.

## ECODRY80

0,8 mm 625 g/m<sup>2</sup>

Eco-responsible membrane for the waterproofing under flooring of exterior spaces and walkable and nonwalkable flat surfaces such as terraces, roofs, balconies and patios. It is composed of a polymeric membrane of high-performance thermoplastic polyolefins CPE (EVA-based Circular Polymer), resulting from the transformation and treatment of raw materials of circular economy, and extruded on polyester fibres.

## ECODRY120

1,25 mm 525 g/m<sup>2</sup>

Eco-responsible multilayer membrane for the waterproofing and uncoupling under flooring of exterior spaces and walkable and nonwalkable flat surfaces such as terraces, rooftops, balconies and patios. Ideal for steam compensation on supporting surfaces with a residual moisture ≤5%. It is composed of a polymeric membrane of high-performance thermoplastic polyolefins CPE (EVA-based Circular Polymer), resulting from the transformation and treatment of raw materials of circular economy, and extruded on polyester fibres.

# healthy covers

highly safe and durable waterproofing

Simple installation with tile adhesive; which in rehabilitation does not require remove the old flooring.

The durability of the system is more than 60 years.

They are flexible membranes with extraordinary plasticity and malleability, which allow a perfect finishing at angles and corners.

They prevent the formation of cracks in the flooring as they allow decoupling in addition to waterproofing.

The membranes have a minimum thickness; and taking into account, that they do not need a compression layer, the increase in height, especially in rehabilitations, is minimal.

# ECODRY INTERIORS

The high-quality waterproofing materials guarantee long-lasting protection of the facilities that is crucial in the hotel wet areas: bathrooms, spas, changing rooms and kitchens; where there is low or high exposure to moisture.

## ECODRY50 membrane

**ECODRY50:** Eco-responsible membrane for waterproofing small walkable flat surfaces (balconies and terraces) and bathrooms, walls and floors in indoor humid areas. It is composed of a polymeric membrane of high-performance thermoplastic polyolefins CPE (EVA-based Circular Polymer), resulting from the transformation and treatment of raw materials of circular economy, and extruded on polyester fibres. It ensures a totally watertight waterproofing and also provides vapor barrier effect.

revestech®

# zero humidity

complete watertightness in interiors and wet areas

**ECODRY50** is a system of highly durable and sustainable thermoplastic polyolefins membranes resulting from the processing and treatment of raw materials of circular economy, recyclable and with a long lifespan.

The quick installation process of **ECODRY50** stands out against liquid and cementitious waterproofing membranes that require applying several layers of product and long waiting times.

**ECODRY50** is easy to handle and install due to its flexibility and lightness. The membranes are so flexible that they can adapt to the irregular shapes of the surface on which they are installed. This facilitates its application in a variety of waterproofing projects. In addition, it reduces installation time and costs compared to other heavier or more rigid materials.

They have a good sealing properties being very effective for sealing joints and edges. Another very remarkable advantage is that its vapor barrier effect prevents moisture from generating in the substrate; in this way, once installed, it does not require maintenance throughout its lifespan.

# WALK LEVEL SYSTEM

On terraces, around swimming pools or in wet areas such as spas, the discharging of surface water requires a constructive solution of maximum safety and optimal canalization. What's more, in a hotel, a discreet and well-designed finishing is an added value that gives elegance to the space.

PREFABRICATED TILEABLE DRAINAGE CHANNEL WALK LEVEL: **WALK LEVEL**: a prefabricated drainage channel system for covering with flooring, 100% watertight that allows the draining of surface waters. Suitable for paved surfaces in internal and external environments. An efficient constructive solution with elegant final aesthetics. Easy installation and maintenance providing security and guarantee to the **DRY** system. The system consists of a series of elements that once connected form a drainage channel for swimming pools and terraces, ready to be covered with flooring. All parts of the **WALK LEVEL** system are available for two ceramic tile widths: 15 cm and 30 cm

## COMPONENTS

\_ Channel provided with two eaves of heat-sealed waterproofing membrane 20 cm wide.

\_ PVC profiles that provide support to the ceramic tiles 1 metre x 29 mm.

The number of profiles will be determined by the total linear metres of the project.

# dry floors

prefabricated tileable drainage channel

Easy to assemble. Perfect and secure joints between elements.

Interior v-slopes that allow a quick and easy evacuation.

High performance polyurethane finish.

Membrane heat-sealed to the eaves to guarantee perfect waterproofing.

revestech®

Minimum thickness

# SUBWATER SYSTEM

The proper waterproofing of swimming pools in hotels is essential to ensure their durability, prevent water leaks, maintain water conditions and comply with safety and hygiene regulations. It also enhances guest experience and protects the reputation of the hotel.

## SUBWATER KIT

**ECODRY 120 30**  
Waterproofing membrane.

**ECODRY 50 BANDA 13X30**  
Waterproof strips for joints and perimeter.

**KITPOOL**  
Special for sealing of joints and edges.

For the waterproofing of swimming pools, Revestech offers the **SUBWATER KIT**. A complete system with **ECODRY 120 30** eco-responsible membrane, **ECODRY 50 BAND 13X30** strips for joints, and adhesive and primer **KITPOOL**. The complete watertightness of swimming pools requires combining the waterproofing of the supporting surface with the **SUBWATER KIT** with the ceramic tiles or glass mosaics; thus, forming a watertight unit where all the pieces are joined with the previous waterproofing. **ECODRY 120** is a multilayer waterproofing membrane specially designed to guarantee the complete watertightness of the surfaces both in new construction and in rehabilitation of all types of swimming pools, cisterns and water tanks in general, through adhered installation. Its versatility means that it is not necessary to remove, in most cases, the existing ceramic flooring. It is composed of a polymeric membrane of high-performance thermoplastic polyolefins CPE (EVA-based Circular Polymer), resulting from the transformation and treatment of raw materials of circular economy, and extruded on polyester fibres. In addition, they have the EPD sustainability certification and the CE marking according to EN 13956:2013. Even though it is a high-performance system, the watertightness of a swimming pool goes further and requires superior training due to the very nature of the type of installation which withstands considerable hydrostatic pressure on the bottom of swimming pools. As we are specialists, professional and responsible, and we want to do things right, this system is exclusive for installers trained and approved by Revestech.

## EXCLUSIVE SYSTEM FOR INSTALLERS TRAINED AND APPROVED BY REVESTTECH

# safe swimming pools

maximum leakproof waterproofing

Maximum watertightness either in new construction and rehabilitation.

In rehabilitation it is not necessary to remove the existing flooring, saving time and costs.

The special composition of the membrane, allows to separate the movements produced by water pressure, avoiding the appearance of cracks in the finishing coat, normally glass mosaic (gresite), as well as the detachment of it.

Total watertightness in the joint between the membrane and the most critical points, especially where a waterproofing reinforcement is needed such as in impellers, skimmers and spotlights.

Sustainable membrane with CE marking and Environmental Product Declaration.

# LEVEL SHOWER TRAY

Hotel showers are often an especially valuable experience for customers. They are designed to provide comfort, relaxation and a touch of luxury, which in this case means: Showering on a floor without slopes, without obstacles, and where water filters through the joints on the flooring. A different sensation with a very avant-garde architectural aesthetic, very different.

**LEVEL SHOWER TRAY:** the prefabricated level tray is invisible because is fully covered by the chosen tiling. The finish design is completely flat shower floor and at the same level as the rest of the bathroom. The shower tray slopes are hidden under the tiles, receiving the water that pass through the gaps, and finally is evacuated in the drain. It includes a horizontal drain, located in the center of the tray and positionable at 360°. An innovative integrated shower system that adapts to any style. Versatile and efficient.

invisible prefabricated tray, with hidden slopes and covered with tiling

1. LEVEL SHOWER TRAY
2. Drain with water trap
3. Tiling profiles
4. Covering
5. Cleaning key

# great distinction

showers without steps, without obstacles; at ground level

CE  
EN 14527:2016 PATENTE N°: ES 2585849

The absence of steps and slopes implies freedom of movement in a homogeneous, wide and accessible space, without separations, of avant-garde and elegant design.

In addition to being ideal for people with reduced mobility, the **LEVEL SHOWER TRAY** is perfect for customers to live the luxury of absolute comfort and the experience of a different shower.

It has antibacterial and fungicidal sanitary treatment, and a system to easily raise the flooring allowing access to the interior of the tray and the siphon drain for cleaning. It does not contain metallic parts, which prevents oxidation.

The **LEVEL SHOWER TRAY** is very versatile as it allows the installation of various ceramic formats as long as one of the dimensions of the tray is covered, either width or length. Preferably porcelain tiles.

# LINEAR LEVEL

The combination of attractive aesthetics, functionality, comfort and a sense of luxury are highly appreciated and enjoyed by guests during their stay. In addition, they help hotels differentiate themselves in such a competitive market.

**LINEAR LEVEL HIDDEN DRAIN:** receives water from one, two or four slopes, and drains it through the perimeter joints of the ceramic piece, until reaching base level and the drain hole. The characteristics are identical to the invisible level shower tray, except it is smaller in size and framed in a sloped shower. A new concept of invisible drain, convenient to use and with a stylish feel.

hidden drainage covered with tiles in shower with slopes

# efficient elegance

showers with high level aesthetics that always captivate

Thanks to the high-performance polyurethane material with which it is manufactured, whose surface has an antibacterial treatment and fungicide is very easy to clean. It also has a key hook that allows you to easily lift the ceramic piece that hides the drain, thus facilitating its perfect cleaning.

Suitable for large ceramic tile formats with tailor-made manufacturing option if needed.

Its installation is simple as it is levelled without the need for special anchors.

The system allows the position of the drainage to be adjusted, offering the possibility of being installed adjacently to the wall of the shower.

It guarantees maximum waterproofing of the supporting surface since it contains an eave of heat-sealed waterproofing membrane at the base of the channel.

# DRY50 SYSTEMS

Waterproofing, ease of cleaning and efficient drainage of showers in a hotel are essential to ensure guest satisfaction and to maintain the integrity of the facilities in the long term. Using **DRY50** systems prevents problems and ensures compliance with the standards of cleanliness and quality in the hotel industry.

# showers to love

elegant, modern, functional and easy to clean

The heat-sealed membrane provides an effective waterproof barrier. This prevents water from seeping through joints or edges, reducing the risk of leaks and damage to the surrounding structure.

A system that is easier to install compared to traditional drains with mortar joints or other sealing methods. This saves time and work during installation.

**DRY50** drains are less prone to corrosion and deterioration over time giving them high durability.

Due to their airtight design, these drains with heat-sealed membrane require less maintenance. It is not necessary to replace joints or sealants regularly.

What's more, being so easy to clean makes them a very attractive choice for the hotel sector, whether in new construction or in bathroom renovation.

## We manufacture for today thinking about tomorrow.

The future of construction, mandatorily, must go through an ecological review of processes and the materials which have been developed in the past. This commitment is materialized day by day in Revestech with greater energy efficiency, with the use of respectful materials and with the maximum optimization of the processes of production.

We reduce air pollution by applying circular economy in waste treatment.

We reduce the use of virgin natural resources by designing 100% recyclable products.

We manufacture products free of toxic substances and without the emission of polluting compounds into the environment.

We minimize the generation of waste by transmitting the importance of recovery.

## Innovation since day one

Revestech is the forward-thinking brand of the Nietos Group. Our philosophy, based primarily on business innovation, means that we have been studying and producing plastic materials for the most diverse industries ever since 1945, the year when the group embarked upon its journey as a producer of plastic textiles in Alicante.

revestech®

## We are manufacturers

Throughout our years of operation, we have amassed so much experience that we are now manufacturers of revolutionary construction systems. With our brand, Revestech, we have positioned ourselves as a trusted partner of architects, surveyors, builders and installers for solving issues related to waterproofing, crack bridging, acoustics and drainage, providing them with an array of convenient and effective solutions.

Systems approved by:

CSTB AIMPLAS AITEX TCNA IAPMO

## Groundbreaking Systems

Our systems occupy a totally new place in the market. The fibre covering of our membranes ensures grip to tiles with cement-based adhesive, allowing professionals to forget about the compression layer during installation and making their work as straightforward as a simple tiling job.

## Ongoing research

Our concern for rethinking spaces is what motivates us to constantly research new solutions that can multiply the possibilities of architectural projects. Our R&D department analyses and tests out new projects at our laboratory before they see the light. What's more, we have an institutional partnership agreement with the Department of Chemistry at the University of Alicante to conduct tests related to our products.

## Commitment to quality and environment

The implementation of an Environmental Management System in accordance with the UNE-EN ISO 14001 standard has allowed us to systematize, in a simple way, the environmental aspects that are generated in each of our activities, promoting environmental protection and prevention of pollution; optimizing the management of resources and waste, and reducing negative environmental impacts. This management certificate is integrated into our quality system according to the UNE EN ISO 9001 standard, which was implemented in 2019. Revestech is UNE EN ISO 9001:2015 certified where ensure customer satisfaction through the ongoing improvement of our products and services. Also, our waterproofing membranes are CE marked, in fulfillment of the legislation in force about essential requirements to provide consumers, companies and Public Administration, information about safety or the product performance. In Revestech, we have our own laboratories and partners too to certify our products.

## Presents on the platforms

Present on the platforms Cype, Acae and Presto. In order to facilitate the work of construction professionals for the realization, planning, calculations etc. of your projects.

## International Strategic Alliances

Production alliances are one of the pillars of our business. There are many brands of recognized national and international prestige that trust us to manufacture their waterproofing products, thus ensuring that the innovation of our solutions reaches many parts of the world.
